Specification

A substitute specification excluding the claims is required pursuant to 37 CFR 1.125(a) because the specification as filed is not in English.

A substitute specification must not contain new matter. The substitute specification must be submitted with markings showing all the changes relative to the immediate prior version of the specification of record. The text of any added subject matter must be shown by underlining the added text. The text of any deleted matter must be shown by strike-through except that double brackets placed before and after the deleted characters may be used to show deletion of five or fewer consecutive characters. The text of any deleted subject matter must be shown by being placed within double brackets if strike-through cannot be easily perceived. An accompanying clean version (without markings) and a statement that the substitute specification contains no new matter must also be supplied. Numbering the paragraphs of the specification of record is not considered a change that must be shown.

Claim Objections

Claims 4-8 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1742

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over either of the admitted prior art of the instant disclosure or Bertollo in view of King. Both of the admitted prior art of the instant disclosure, as expressed in the Jepson-type preamble of instant claim 1 for example, and Bertollo, as shown in the embodiments of figures 2 and 3 for example, teach a gas lance made of a truncated cone of fireproof material having entry and exit surfaces with slit shaped channels between the surfaces pointing essentially radially outward from the axis of the truncated cone, thereby showing all aspects of the above claims except to specifically teach that the entrance and exit slits of the channels are in offset relation to one another. King teaches, at col. 5, lines 10-38, and figure 3 for example, teaches that it was known in the art at the time the invention was made to arrange entry and exit openings of gas channels in a gas lance made of fireproof material in offset relation to one another in the manner recited in instant claims 1-3 in order to improve the performance of the gas injection lance. Because improved performance would also be desirable in the gas lance of both Bertollo and the admitted prior art of the instant disclosure, motivation to arrange the gas channels of either the admitted prior art of the instant disclosure or Bertollo so that the exit and entry openings are offset, as taught by King, would have been a modification obvious to one of ordinary skill in the art at the time the invention was made.

Art Unit: 1742

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Aramaki et al and Naujokat et al are also cited as further examples of prior art gas injection lances.
